

DAMO GUARDRAIL

A Robust & Flexible Protection Solution

A ROBUST & FLEXIBLE PROTECTION SOLUTION

This modular guardrail is designed to offer reliable protection for people, pathways, workstations, building infrastructure or manufacturing equipment from forklift, pallet truck and other vehicle activity throughout your warehouse.

Made with high-quality structural steel with a heavy gauge to offer true impact resistance.

No other competing railing system comes with such heavy-duty floor-level protection – able to protect against forklift blades.

Lead time is short as the unit can be ready to ship in less than two weeks.

The DAMO GUARDRAIL can easily be installed by your own maintenance crew or by Damotech certified installers.

DAMO GUARDRAIL

Made of 3/16" thick structural steel for maximum impact resistance. Tubes are 3" wide by 2" high.

The 3" x 3" guardrail post is composed of 3/16" structural steel tubes.

Steel stiffeners are welded for maximum structural strength.

Standard 42" height

Low-level protection guards against forks and ground-level impacts.

5/8" x 5-1/2" Hilti screw-type anchors.

Reinforced modular sections make the DAMO GUARDRAIL strong and easy to ship and assemble.

OPTIONS

Height

42" high

Width

24" or 48" spans available
Sections can be connected for longer runs and corners.
