

# DAMO SHIELD

High-Impact Column Protector

## ULTIMATE STRUCTURAL COLUMN PROTECTION

The DAMO SHIELD is a high-impact protector that safeguards your building columns from high-impact collisions from forklifts or any other machinery or vehicle.

The DAMO SHIELD surrounds the column without structurally relying on it. Upon collision, it will absorb 100% of the impact energy.

Anchored to the ground with eight heavy-duty Hilti anchors, the DAMO SHIELD will stay put, no matter what happens.

Quick installation in under 30 minutes.

Fits columns up to 16" wide and can even accommodate pipes and drains, or electric cables running next to the columns.

# DAMO SHIELD

## SIZE

### Standard

Protects columns of up to 10 x 10 inches, and has an exterior diameter of 20 inches.

### XL

Protects columns of up to 16 x 16 inches and has an exterior diameter of 30 inches.
