METALWARE BOLTLESS SHELVING

Quality - Manufactured in North America, Metalware shelving is held to the highest standard, ensuring a great quality product every time.

Efficiency - Shelves can easily be rearranged and all component parts installed without dismantling. Interlok No-Bolt is completely assembled in an upright position. There is no additional floor space needed for the process of assembly.

Economy - Assembly cost is a vital factor. Interlok No-Bolt Shelving saves up to 80% of assembly time, versus standard nut & bolt units.

MUTLI-LEVEL

Maximize your use of space by building vertically. High-rise, catwalk, and full floor application.

NEW SHELF CLIP & POST

1" Adjustability - This new design allows the shelves to be placed and adjusted in 1" increments.

No Interference - 1" adjustability is completely independent from one side to the other. Clips do not interfere with each other, or other components.

1 Clip Fits All - New shelf clips do not interfere with foot plates at lowest shelf level, eliminating the need for short shelf clips.

INTERLOK BOX SHELF

Made from 20 gauge steel, the front and rear flanges are roll-formed into a box beam construction and welded for higher capacity.

As with all Metalware shelves, the corners are lapped to provide additional strength.

The Interlok Box Shelf is interchangeable with our existing Interlok No-Bolt systems.

WIDESPAN

Easy assembly for bulk storage needs.

The 2" profile beams which support the shelves are available in a variety of widths and capacities.

The frame connectors connect the posts from front to back and are available in a variety of depths.

Wood shelves for our Widespan line are available in a multitude of sizes to meet your storage needs.

Ideal for record storage, Widespan's dimensions are in line with standard archival box sizes.
